CREATING A PORTFOLIO WEBSITE

OBJECTIVE:

The objective of this project is to create a portfolio website. There will be admin and user roles for this website. Admin role will be able to modify, update and/or add content to the portfolio website whereas other user roles will be able to just view the portfolio. This Portfolio website should contain below tabs,
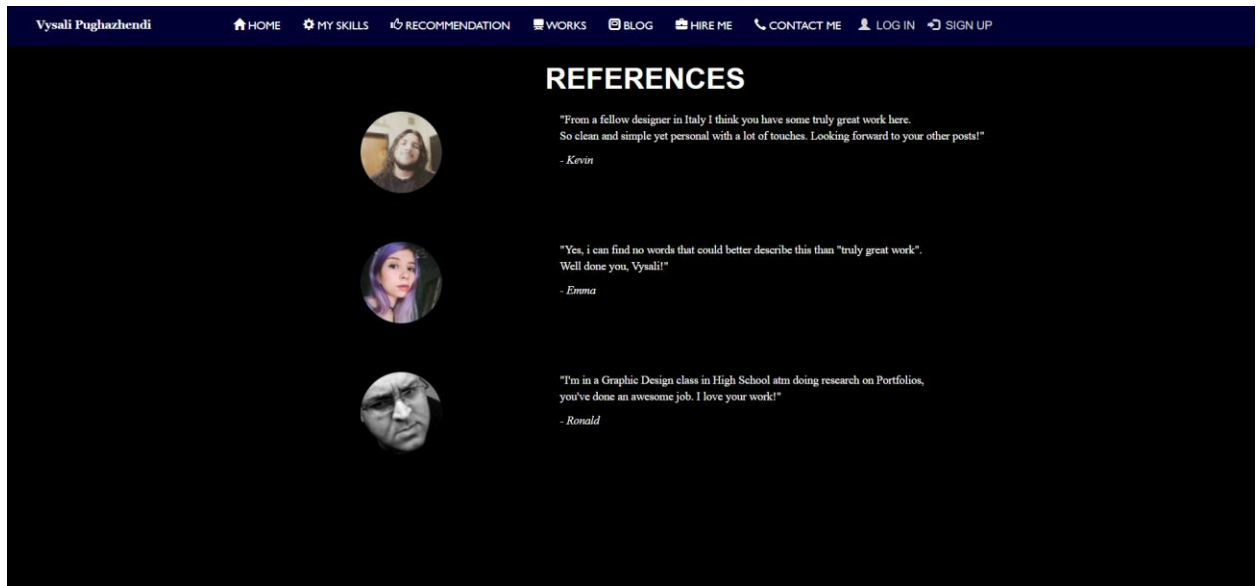

- **Home page**: This tab should display welcome note to all the users and the show the link to download the resume.

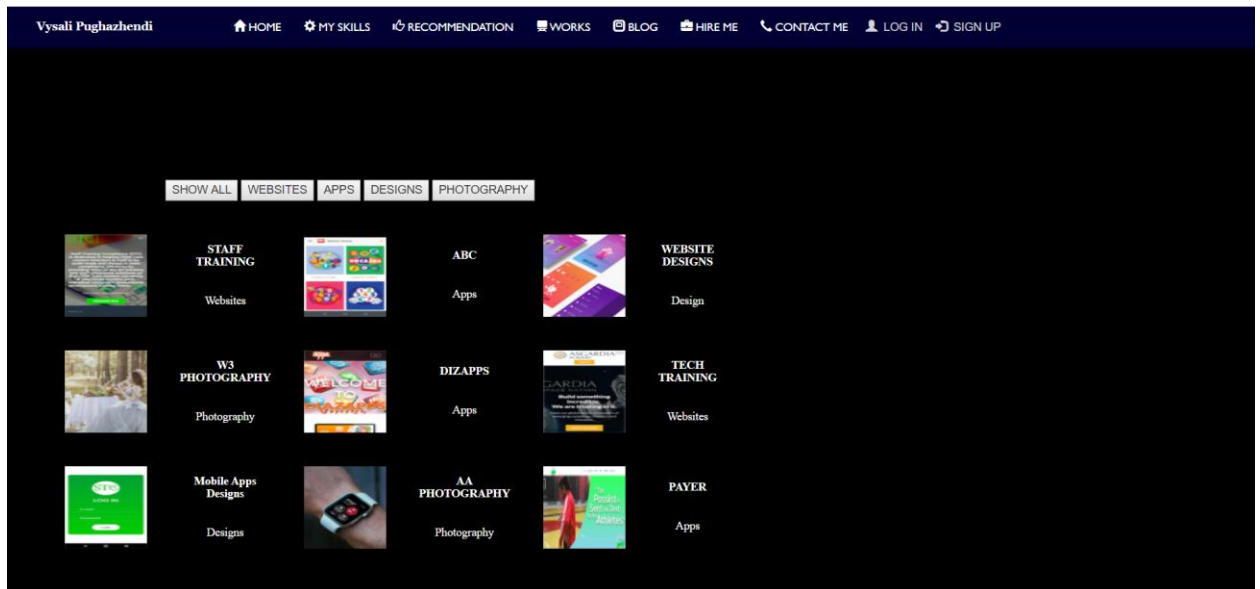

- **Skills**: This tab should display my various skills including but not limited to my professional skills, communication skills, leadership skills, etc.

- **Recommendation**: This tab should display the recommendations given by my professors, supervisors and peers about me.
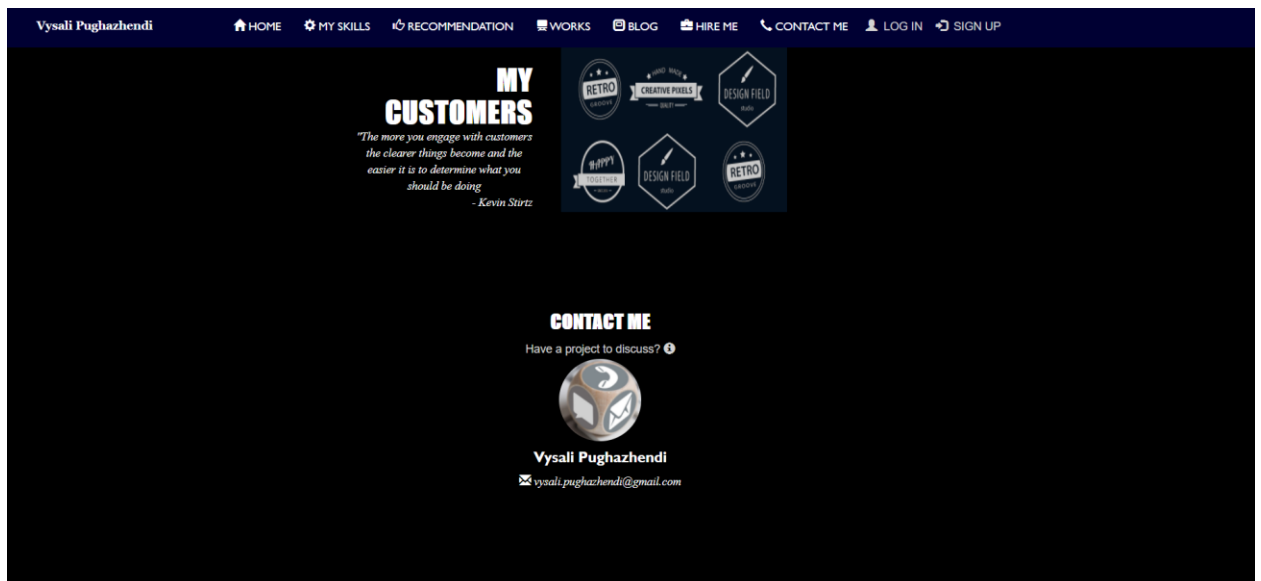

- **Works**: This tab should contain information about the websites and applications that I have created and the training that I have taken.

- **Hire me**: This tab should contain information about the prices that I charge for different professional services.

- **Contact**: This tab should contain my name, phone, email and address for others to contact.

- **Login**: This tab should allow user to enter username and password. This is only for existing users. The username and password will be validated against the database to ensure correct credentials are entered. If user forgets the credentials, they will have option to click forget username/ password and then prompted to enter email address and then user will receive email to change the credentials.

- **Sign up**: New users should sign up in this page and upon successful sign up, they should be routed to login page to enter the credentials and login. It should not allow existing users to sign up again. Email ID should be always unique while signing up.
